My Flashcards; Flashcard Library; About; Contribute; Search; Help; Sign In; Create AccountI would like to find the fastest way to check if a file exist in standard C++11, C++, or C. I have thousands of files and before doing something on them I need to check if all of them exist.The helper method only creates one list and one array. The point is that the result needs to be an array, not a list... and you need to know the size of an array before you start.
