Description. Editor Hari Singh Nalwa (president of American Scientific Publishers, and a prolific author, editor, scientist, and inventor) presents 45 chapters written by contributors from 15 countries and divided into four thematic volumes: inorganic photochemistry, organic photochemistry, supramolecular photochemistry, and photobiology. The Handbook of Photochemistry delivers an exhaustive, up-to-date collection of photophysical and electrochemical data on organic compounds and transition metal complexes. It represents an invaluable compilation of complementary data, background information, and references for students, researchers, and spectroscopists performing a vast assortment of photochemical experiments. Editor Hari Singh Nalwa (president of American Scientific Publishers, and a prolific author, editor, scientist, and inventor) presents 45 chapters written by contributors from 15 countries and divided into four thematic volumes: inorganic photochemistry, organic photochemistry, supramolecular photochemistry, and photobiology. Since the publication of the second edition of this handbook in 1993, the field of photochemical sciences has continued to expand across several disciplines including organic, inorganic, physical, analytical, and biological chemistries, and, most recently, nanosciences.
