

Download Heat Exchanger Question Answer

Answer: d Explanation: Nature of heat exchange process, relative direction of motion of fluid, mechanical design of heat exchange surface and physical state of heat exchanging fluids. The section contains questions on Black body heat exchange, shape factor concepts, Non black body heat exchange, radiation shield, gaseous radiation, fouling factor, physical and geometrical property symbols, adiabatic surface, reradiating surface and other network approaches. Heat Exchangers – MCQs with Answers 1. Which of the following is/are example/s of heat exchanger? a. Feed water heater in which a stream of steam is directly mixed with cold water and the mixture leaves at uniform temperature Plate heat exchangers are extremely efficient and can be workhorses in many different types of environments. But, knowing what to watch for when inspecting and maintaining your plate heat ...
