MRI has become an important tool in the management of patients with diseases of the gastrointestinal tract, such as rectal cancer and inflammatory bowel diseases. Techniques more specific to the particular section of the gastrointestinal tract being assessed (eg, MR colonography) are provided at the beginning of the chapter. For completeness, assessment of the extragastrointestinal site (eg, peritoneum) is also included. Dynamic studies, such as those of bowel motility and the pelvic floor, are also covered. Each topic is also summarized with key points at the beginning of each chapter. MRI has become an important tool in the management of patients with diseases of the gastrointestinal tract, such as rectal cancer and inflammatory bowel diseases.
