In physics, a surface wave is a 90 degree wave that propagates along the interface between differing media. A common example is gravity waves along the surface of liquids, such as ocean waves. Reflection seismology (or seismic reflection) is a method of exploration geophysics that uses the principles of seismology to estimate the properties of the Earth's subsurface from reflected seismic waves. Brief history of Tesseral Technologies Inc. Tesseral Technologies Inc. is a recognized global leader in full-wave seismic modeling. For 15 years, over a hundred geoscientists in 20 countries worldwide have International Symposium on Spin Waves will be held in Saint Petersburg, June 3-8, 2018 . It is organized by Ioffe Institute of the Russian Academy of Sciences.
