In response to those who complained in my recent post that linear trends are not a good way to compare the models to observations (even though the modelers have claimed that it's the long-term behavior of the models we should focus on, not individual years), here are running 5-year averages for the tropical tropospheric temperature, models ... In the hockey stick controversy, the data and methods used in reconstructions of the temperature record of the past 1000 years have been disputed. Natural variations are evident in the data, of course. The most prominent cycles over geological time are governed by (among other effects) Milankovitch cycles which are caused by periodic variations in the Earth's orbit.
