

Download Warming Stories Volume Three

Dear Twitpic Community - thank you for all the wonderful photos you have taken over the years. We have now placed Twitpic in an archived state. Gas vs Coal. Natural Gas vs Coal: Undoubtedly, high efficiency natural gas-fired power stations can produce up to 70% lower greenhouse gas emissions than existing brown coal-fired generators, and less than half the greenhouse gas emissions of the latest technology black coal-fired power stations. Global warming, also known as anthropogenic (or human-caused) global warming, is the rising average temperature of Earth's atmosphere and oceans and its related effects. "Determined to help the public understand global warming, Primack decided to search for evidence of climate change in Concord, Massachusetts, home of Walden Pond, made famous by pioneering environmentalist Henry David Thoreau.
